Company Introduction

02 Factories History
Our Journey from 1920 to 2025.

04 Cambodia Factory
A Strategic Step Forward in Global Manufacturing.

06 In-House Testing Lab
Professional Umbrella Testing Laboratory.

07 Certification
International Standards Ensuring Quality, Ethics, and Sustainability.

08 Sustainability
Recycled Materials, Clean Energy, and PFAS-Free Innovation.

10 Individual Design
Customizable Styles, Colors, and Branding Options.

12 Canopy Color Options
A Wide Selection of Standard and Pantone-Matched Colors.

Product

14 Exclusive Umbrellas 
Premium Designs Developed for High-End Brands.

27 New Umbrellas 
Our Newest Collection of Umbrella Designs.

57 Economical Umbrellas 
Reliable Quality With Cost-Effective Pricing.

69 Mini Umbrellas
Compact and Lightweight for Everyday Carry.

76 Stick Umbrellas
Durable Long-Handled Umbrellas in Multiple Materials.

87 Golf Umbrellas
Large Coverage for Sun and Rain Protection.

94 Specialty Umbrellas
Innovative Solutions in Specialty Umbrellas.

Factory History

1920 SISHUN Store: Our Origin

My great-grandfather was born in 1890, and his given name was SISHUN. In 1920, he opened the SISHUN Store, marking the beginning of our family's connection to craftsmanship and trade. The store was later passed down to my grandfather, and then to my father, who continued operating it until 2007.

2006-2016 Former China Factory

In 2006, Simon, the current owner and fourth-generation successor, founded Topumbrella and established the first Sishun Umbrella Factory. This marked the beginning of our journey into high-quality umbrella manufacturing, combining traditional craftsmanship with modern production.

2008 Topumbrella Brand Launched

In 2008, we officially registered the global trademark Topumbrella. From that point onward, we began manufacturing umbrellas for world-famous brands, museums, retailers, and corporate partners.

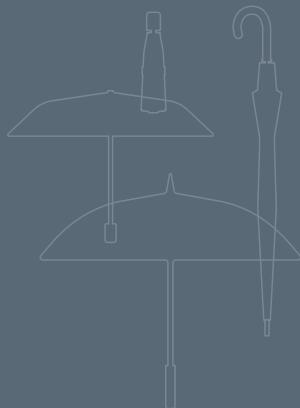

2016 New China Factory Built

As the business expanded, Sishun built a larger and more advanced factory in 2016. This new facility introduced upgraded production lines, improved testing capabilities, and a stronger focus on eco-friendly materials, RPET fabrics, and sustainable manufacturing practices.

2025 Cambodia Factory Built

In 2025, SISHUN opened a new factory in Cambodia, offering customers more flexible country-of-origin options, tariff advantages, and shorter lead-time solutions. This expansion further strengthened our global supply chain and manufacturing capacity.

Cambodia Factory

A Strategic Step Forward in Global Manufacturing.

Expanding Our Production Footprint

We are proud to announce that our Cambodia factory is fully operational, marking a significant milestone in our commitment to delivering excellence through diversified manufacturing capabilities. This strategic expansion represents more than geographical growth—it's our response to evolving global trade dynamics and our pledge to provide enhanced service, faster delivery, and greater supply chain resilience for our valued partners worldwide.

Since establishing our headquarters in Huizhou, China in 2006, Sishun Topumbrella has built a reputation as a premier high-end umbrella manufacturer, trusted by prestigious brands. Our China facility has thrived for 20 years, setting industry benchmarks for quality and innovation. Now, our Cambodia factory extends this legacy while offering our clients strategic advantages in an increasingly complex global marketplace.

Why Cambodia? Strategic Advantages for Your Business

Trade Access & Cost Efficiency

Cambodia's preferential trade agreements provide duty-flexible access to major markets, significantly reducing landed costs for our customers. This translates directly to improved pricing competitiveness without compromising the quality standards you expect from Topumbrella.

Supply Chain Diversification

In an era of geopolitical uncertainty and evolving trade policies, having production capacity across multiple countries provides crucial risk mitigation. Our dual-factory model offers flexibility in sourcing strategies, allowing you to optimize your supply chain based on your specific market requirements.

Young, Skilled Workforce

Cambodia offers access to a motivated, trainable labor force ideal for scaling precision manufacturing. Our investment in local talent development ensures that the same craftsmanship standards perfected in China are seamlessly replicated in our new facility.

Geographic Synergy

The proximity between Cambodia and China facilitates seamless coordination of resources, materials, and expertise between our two facilities. This geographic advantage allows us to leverage the strengths of both locations while maintaining consistent quality control in an increasingly complex global marketplace.

Factory Capabilities: Built for Scale and Quality

1. Location & Accessibility

Our Cambodia facility is strategically located in Samrong Tong District, Kampong Speu Province—just one hour from Phnom Penh International Airport. This accessibility ensures efficient logistics for both incoming materials and outbound shipments to global destinations.

2. Production Capacity

With a monthly production capacity of 100,000 units, our Cambodia factory provides substantial volume capabilities to support both growing brands and established enterprises. Whether you need 5,000 pieces for a seasonal launch or 50,000 units for a major retail program, we have the capacity to deliver.

3. Quality Assurance

Quality is non-negotiable at Topumbrella, regardless of production location. Our Cambodia facility operates under the same rigorous quality management system refined over 20 years in China:

- BSCI Certification: Ensuring ethical labor practices and safe working conditions
- ISO Quality Standards: Currently in certification process, expected completion by mid-2025
- Client Audits: Successfully passed audits by major international brands
- In-House QC Team: All inspections—incoming materials, in-line production, and final product—conducted by our dedicated quality control professionals

Product Capabilities: Versatility Meets Compliance

Regulatory Compliance

Our umbrellas meet evolving global regulations, including:

- PFAS/PFOA-free production standards for EURO and US market compliance
- EU chemical restrictions (REACH compliance)
- California Proposition 65 requirements
- Sustainable material certifications (GRS-certified recycled content)

Design & Development Support

Manufacturing excellence extends beyond production. Our Cambodia operations are backed by comprehensive design and development services:

- In-house design team 2 engineers and 3D printer for custom product development
- Print development and color matching services
- Technical pack creation and specification documentation
- Sampling and prototyping capabilities
- Product innovation consultation

Packaging & Retail Solutions

We understand that presentation matters. Our Cambodia facility offers:

- Custom barcode labeling to your specifications
- Retail-ready packaging solutions
- Custom inserts and promotional materials
- Sustainable packaging options aligned with eco-conscious brand values

Storage & Logistics

Proper product care extends throughout our facility:

- All products stored on plastic pallets to prevent moisture damage
- Climate-controlled warehousing with proper ventilation
- Regular warehouse inspections and maintenance protocols
- Desiccant packs included during pack-out for moisture protection
- Experienced logistics partners for seamless global shipping

Timeline & Lead Times

60-90 days depending on order complexity, customization requirements, and volume. Rush production available for urgent requirements.

Connect With Us

Our Cambodia factory represents the future of umbrella manufacturing—combining strategic location advantages, competitive pricing, ethical manufacturing practices, and unwavering quality standards. We invite you to explore partnership opportunities that can strengthen your business while supporting responsible, sustainable manufacturing. At Topumbrella, we believe lasting success comes from strong partnerships built on transparency, trust, and shared values. Let's build the future together.

In-House Testing Lab

Professional Umbrella Manufacturing & Testing Laboratory - Topumbrella Quality Control.

- Anti-Rust Testing
- Rain Testing
- UV Protection Testing
- Wind Resistance Testing
- Tensile Strength Testing
- Fabric Color Matching Testing
- Waterproof Testing
- Water Repellency Testing
- Fabric Abrasion Testing

At Topumbrella, we operate a fully equipped in-house laboratory to validate every umbrella we manufacture. From frame strength and salt-spray corrosion resistance to UV blocking, wind tunnel performance, waterproof coating and abrasion durability — our scientists and QC teams inspect raw materials and finished goods to guarantee industry-leading reliability and durability.

As a professional high-end umbrella manufacturing facility, Topumbrella established our in-house professional testing laboratory for two crucial reasons. First, outsourcing to external testing companies was significantly slowing our production cycle—testing processes typically required 1-2 weeks, severely impacting our efficiency and ability to serve our customers promptly. Second, our IQC (Incoming Quality Control) team needed immediate access to professional equipment to test every batch of incoming materials and finished products. Based on these testing results, we make critical decisions about material acceptance or rejection, ensuring only the highest quality components enter our production line.

Certification

TopUmbrella's Certifications:
Our Commitment to Quality,
Responsibility, and Sustainability.

In today's competitive global marketplace, factory certifications have become essential indicators of quality, sustainability, and ethical manufacturing practices. These certifications provide crucial assurance to brands and consumers that products are manufactured under safe working conditions, meet strict environmental standards, and adhere to international quality benchmarks.

At TopUmbrella, we believe that excellence is not just about crafting premium umbrellas — it's also about meeting the highest standards of quality, ethics, and sustainability. Our certifications demonstrate that every stage of our manufacturing process, from material sourcing to final inspection, aligns with internationally recognized best practices.

Below is an overview of the certifications that define who we are and how we work.

Sustainability

Innovating with recycled and plant-based materials, clean energy, and chemical-free protection—without compromising performance.

Introduction

At Topumbrella, sustainability is not an accessory to manufacturing—it is the foundation of a new production philosophy. Our transformation is anchored in meaningful investments: renewable energy, circular materials, and safer, next-generation technologies. The result is a collection of umbrellas engineered for brands that value durability, responsibility, and refined performance.

A New Chapter of Transformation

Inspired by long-term partnerships with global leaders in sustainability, Topumbrella reimagined every layer of production—from energy infrastructure and material sourcing to chemical integrity and environmental impact. What began as a shift toward cleaner energy has evolved into a comprehensive ecosystem of recycled fabrics, fully recycled components, bio-based materials, and advanced chemical-free protection. This transformation sets a new benchmark for the umbrella industry.

PFAS-Free Protection & European Compliance

Regulations worldwide—especially in the European Union—are entering a new era of stringency regarding PFAS. In anticipation of this shift, Topumbrella has transitioned to a fully PFAS-free production system, eliminating PFOS, PFOA, and the entire class of long-chain fluorinated compounds traditionally used in water-repellent treatments.

Our PFAS-free technologies exceed the expectations of modern consumers and align with EU REACH standards and future European PFAS restrictions. This ensures long-term compliance, safer products, and a significantly reduced chemical footprint. For brands entering or expanding in Europe, PFAS-free assurance is not just an advantage—it is an essential mark of quality and trust.

1) Solar Power at Scale

- A 2.5-megawatt rooftop solar system powers the core of our daily operations—from cutting lines to molding equipment, laboratory testing, and facility lighting—bringing precision manufacturing and clean energy together.
- Annual carbon reduction reaches approximately 1,200 tons of CO₂, equivalent to removing more than 260 cars from the road.
- Smart energy storage and strategic grid feedback reinforce a circular energy model designed for resilience and long-term stability.

2) RPET Recycled Fabric

- Premium-grade RPET fabric transforms post-consumer plastic bottles into durable, refined textiles with exceptional water resistance, color fastness, and tensile performance—equal to or surpassing virgin polyester.
- All coating and finishing processes are powered by clean energy, further reducing the environmental footprint of each canopy.

3) 100% PCR ABS Components

- Structural elements—including handles, ribs, and specialty components—are crafted from 100% post-consumer recycled ABS, a milestone that demanded years of engineering refinement and certification.
- These fully recycled components deliver strength, resilience, and traceability, replacing virgin plastics entirely in major functional parts.

4) Straw and Plant-Based Innovation

- Agricultural by-products such as wheat and rice straw are elevated into lightweight, elegant, and durable umbrella components—reducing open-field burning and supporting rural communities.
- Bio-based designs reduce environmental load while offering brands a material story rooted in nature and responsibility.

5) A Garden of Natural Materials

- Beyond straw, our portfolio extends to bamboo, coffee grounds, coconut fiber, crop residues, and responsibly sourced animal fibers—each selected for their strength, moisture resistance, or natural water-repellent qualities.
- This diversity empowers brands to craft distinct product identities while honoring advanced sustainability principles.

6) Chemical-Free Water Resistance

- Our biomimetic, lotus-inspired surface technology eliminates traditional PFC and PFOA treatments—achieving high-end water repellency through the microscopic geometry of the fabric itself.
- Rigorous testing demonstrates exceptional resilience after UV exposure, abrasion, and extended rain cycles, outperforming conventional chemical coatings.
- The innovation advances user safety, environmental protection, and global compliance without compromising performance or longevity.

Carbon reduction via solar

2.5 MW solar power delivering ~1,200 tons of CO₂ reduction annually

Full traceability and recycling

100% PCR ABS structural components with full traceability

Chemical-free protection

PFAS-free & EU-compliant water-repellent technologies

Circular economy partnerships

Circular partnerships with farmers, recyclers, and material innovators

Material innovation diversity

Wide portfolio of natural, recycled, and advanced sustainable materials

Closing Statement

For brands pursuing excellence—whether in ESG leadership, restricted-chemical compliance, or elevated product storytelling—Topumbrella offers a manufacturing platform where sustainability and performance coexist seamlessly. From canopy to handle, from energy to chemistry, every umbrella expresses a commitment to a better future.

Individual Design

Color Option of Cover

- ✓ More standard colors
- ✓ fully dyed to Pantone color
- ✓ full color printing

Coating & finishing

Special effects with color, metallic or reflective coating.

- ✓ Teflon fabric coating
- ✓ Nano fabric coating
- ✓ UV protective coating

Umbrella frame

You can choose from many different frame styles, including windproof and fully color-matched fiberglass options.

Umbrella shaft

Steel, aluminum, wood, carbon fiber, fiberglass.

Handle types & material

You can choose different shapes and material to suit your tastes.

We can develop your idea to the handle with a 3D printer.

Individual Design

You can choose different styles and place promotional logos in various positions, such as on the canopy, pouch closure, or handle.

Examples for your promotional labelling

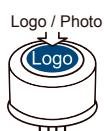

- A 1-colour print motif, white.
- B 1-colour print motif, black.
- C 2-colour print motif, white & black.

Print your promotive logo

Doming

Plastic doming
High-quality finished surface
Photo-realistic result

Laser engraving

Laser your promotive logo on handles and microfiber towels.
Clear and elegant.

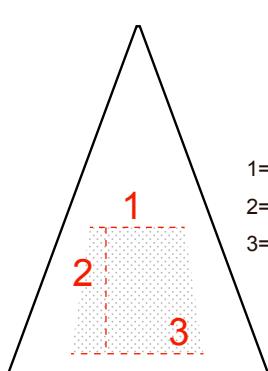

EVA laser engraving

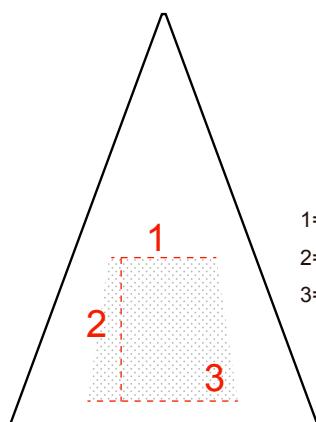

EVA handle would be laser with your promotive logo.

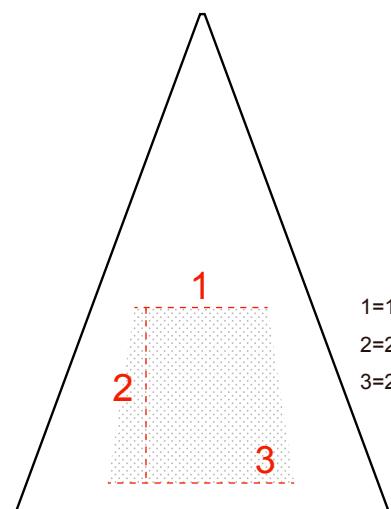

Umbrella print areas
